

CLAIM AMENDMENTS:

Claim 1 (Currently Amended): A display module comprising a plurality of light emitting elements, a metal plate, a circuit board and a display panel, the light emitting elements and the circuit board being arranged on the metal plate, and the light emitting elements being wire bonded to the circuit board and a lens being formed atop the light emitting element, the metal plate being arranged with the light emitting elements and the circuit board being positioned on a lateral side or around the display panel

Claim 2 (Original): The display module as in claim 1, wherein the light emitting element is LED.

Claim 3 (Original): The display module as in claim 1, wherein the light emitting elements are pasted to the metal plate.

Claim 4 (Original): The display module as in claim 1, wherein the light emitting elements emit light with same color or different colors.

Claim 5 (Currently Amended): The display module as in claim 1, wherein the display panel is of any shape, such as has a rectangular shape or circular shape, etc.

Claim 6 (Original): The display module as in claim 1, wherein the display panel is coated with lacquer or pasted with light-blocking or light-reflecting tape on circumference or backside thereof.

Claim 7 (New): A display module, comprising:

AMENDMENT

a rectangular display panel having two primary surfaces and four lateral sides;

a circuit board located on one of the lateral sides;

a plate mounted on the circuit board and having an extension portion to

shield at least one of the primary surfaces; and

a plurality of light emitting elements mounted on the plate, being arranged at the one lateral side to emit light inside the display panel, and being electrically connected with the circuit board.

Claim 8 (New): The display module as in claim 7, wherein the four lateral sides are disposed at an outer periphery of the two primary surfaces, so that the four lateral sides and two primary surfaces form a cuboid.

Claim 9 (New): The display module as in claim 8, wherein the circuit board includes a plurality of holes, and the light emitting elements are fitted through the holes, respectively, to be mounted on the plate.

Claim 10 (New): The display module as in claim 8, wherein the light emitting elements are wire bonded to the circuit board.

Claim 11 (New): The display module as in claim 8, further comprising a plurality of lenses, each being disposed on top of a respective light emitting element to encapsulate each of the light emitting elements.

Claim 12 (New): The display module as in claim 7, wherein the plate is metal.

Claim 13 (New): The display module as in claim 7, wherein the light emitting

elements are light emitting diodes.

Claim ~~14~~ (New): The display module as in claim 13, wherein the light emitting diodes are the same color.

Claim ~~15~~ (New): The display module as in claim 13, wherein the light emitting diodes have different colors.

Claim ~~16~~ (New): The display module as in claim 7, wherein the light emitting elements are adhered to the plate using an insulative thermal glue.

Claim 17 (New): The display module as in claim 7, wherein the display panel is coated with a lacquer.

Claim 18 (New): The display module as in claim 7, wherein the display panel has one of a light-blocking and a light-reflecting tape adhered thereto.--
